

Network Delivery Portfolio

391

Reporting Period:

Q2 2025

**Disclaimer**  
Dates shown in the Network Delivery Portfolio are based on an unconstrained scenario and are, therefore, indicative and subject to change. Information in these documents with reference to completion dates (Energisation (EI) Dates, Estimated Completion Dates, Forecast Completion Dates and Indicative Completion Dates) has been prepared with all reasonable care and diligence.

EirGrid is focused on completing reinforcements which give us most benefit and have the highest degree of deliverability. Customer connection programmes are also subject to change, and we are focused on delivering demand and renewable customer connections which support economic and social development while meeting government targets.

While all reasonable care has been taken to prepare this document, and the accompanying Network Delivery Portfolio (NDP) dataset, we can make no guarantee to the quality, accuracy and completeness of the information herein. We do not accept responsibility for any loss associated with the use of this information. Use of these documents and the information they contain is at the user's own risk. Information in these documents does not amount to a recommendation as regards to any possible investment. Before taking business decision based on the content of these NDP documents, we advise that interested parties seek separate and independent opinion in relation to the matters covered by these documents.

All outage information is published here: <https://www.eirgridgroup.com/customer-and-industry/general-customer-information/outage-information/>

Gateway 3 / Capital Approval (GW3/CA)	Gateway 6 / Project Agreement (GW6/PA)	Energisation (EI)
Once the grid requirements have been identified and assessed, the project is then approved by submitting the Gateway 3 Paper. At this point, milestone dates for the subsequent gateways are set.	This is when the final deliverables of the project are formally agreed and the project is handed over to ESB Networks to deliver the agreed solution.	The Energisation date is when the work is substantially complete, the project has been energised and is ready to transfer power. The energisation of new plant and equipment requires an 'outage' to enable the commissioning teams to work safely.

RAG Status Key
Milestone Achieved
Milestone Achievable within 3 months of PR5 Baseline
Milestone Achievable within 12 months of PR5 Baseline
Milestone Achievable outside of 12 months of PR5 Baseline

<b>Footnote:</b> * The timeline for this project is currently being updated. Additional information will be provided in the next quarterly update. ** Energisation date Not Applicable *** Local Security of Supply (LSoS) Incentive Plan Projects **** Energisation date represents the final energisation date. All 220 kV elements are scheduled to be completed by 2031, with remaining scope inclusive of all 110 kV circuit transfers to take place between 2031 and 2035 Projects highlighted in yellow are new projects or changes since last publication Milestones dates highlighted in bold with white fonts represent changes to milestone dates since the last publication.
