

## Appropriate Assessment Screening Determination

### Site Investigation Works for CP1311 Athlone- Lanesboro- 110 kV OHL [Exempted Development] Counties Longford and Roscommon

In accordance with Article 6(3) of the EU Habitats Directive (Directive 92/43/EEC) and Regulation 42(1) of the European Communities (Birds and Natural Habitats) Regulations 2011 as amended ('The Regulations'), EirGrid has undertaken Appropriate Assessment (AA) screening to assess, in view of best scientific knowledge and the conservation objectives of relevant European sites, if the CP1311 Athlone- Lanesboro- 110 kV OHL [Exempted Development] ('the development') individually or in combination with other plans or projects would be likely to have a significant effect (s) on a European site(s).

The development comprises Intrusive Foundation Investigations at 15 no. 110kV towers (EM1, AM13, AM34, AM70, AM80, AM99, AM108, AM118, AM139, AM159, AM173, AM179, AM187, AM197, EM199).

#### Analysis of Pathways to European sites

The nearest element of the works to European sites is Angle Mast 139 (EM139), c. 0.100 km and 2.2 km from the respective boundaries of the Lough Ree Special Area of Conservation (site code 440)<sup>1</sup>, and Lough Ree Special Protection Area (site code 4064)<sup>2</sup>.

There are no watercourses or drainage ditches within any of the work sites, with hydrological connectivity to European sites containing pollution-sensitive species. All works are outside the 'Medium Risk' (or 1 in one hundred year)<sup>3</sup> flood plan from the River Shannon.

None of the works are within the catchment of any Qualifying Interest (QI) Freshwater Pearl Mussels *Margaritifera margaritifera*, Atlantic salmon *Salmo salar*, or Lamprey species.

None of the works require instream works, or works within or adjacent wetlands (including sites monitored by Birdwatch Ireland, bogs, or woodlands).

There are no other European sites nearby, or potentially connected to the development via a source-pathway-receptor linkage with likely significant effects.

The AA Screening assessment has reviewed the nature and scale of the works against hydrological connectivity and excluded the risk of downstream surface water impacts to any European sites. The risk of ex-situ impacts to the Qualifying Interests and Special Conservation Interests roosting, foraging, or nesting away from European sites has also been excluded, following analysis of known and potential habitats for mobile bird and other animal populations.

#### AA Screening Statement

In accordance with Regulation 42(7) of the European Communities (Birds and Natural Habitats) Regulations 2011 SI 477 as amended, EirGrid has made a determination following screening that an Appropriate Assessment is not required as the project individually or in combination with other plans or projects is not likely to have a significant effect on any European sites. The risk of likely significant effects on European sites can be excluded on the basis of objective evidence.

This determination is based on the location, scale, extent and duration of the development, including temporary works, and has not taken account of measures intended to avoid or reduce significant effects on European sites.
