

Connected Wind Report 25/05/2009

Installed Wind Capacity	DSO	TSO	Total
As of the 25/05/2009	564	513	1077

Definitions :

DSO: A wind farm is considered connected for its full Installed Capacity when it has passed its G10 testing

TSO: A wind farm is considered connected when it has energised its transformer; the MW value used is based on the Available Installed MW Capacity (Number of available turbines times the size of turbine).

The MW values are the farms Installed Capacities; these may be different to the farms MEC or Available Capacity
