

Contracted TSO (Non Wind) Generators

Correct as of 15 June 2018

Node and Associated Voltage	Ref	Name	Type	MEC (MW)	Signed Date*
Blundestown 110 kV	TG263	Blundestown	Solar	80.0	Aug 2017
Cahernagh 110 kV	TG166	Cahernagh Mid Merit**	OCGT	101.0	Oct 2013
Kilpaddoge 110 kV	TG256	Kelwin Power Plant	Hybrid	41.6	Jun 2016
Rosspile 110 kV	TG272	Rosspile Solar Farm	Solar	95.0	May 2018
Timahoe North 110 kV	TG278	Timahoe North	Solar	70.0	May 2018

Total Contracted: 387.6

Note:

Maximum Export Capacity (MEC) is by definition the contracted maximum export value (in MW) of an entire generation station in accordance with the generator's connection agreement. However, to illustrate the capacity of each individual unit within a generation station the MEC is broken down and stated on a per unit basis. For those generators above with no MEC included, please refer to the Connected report as the Installed MW above refer to the remainder of the MW due to be installed to complete the connected MEC.

When generators are a mix of capacity from different Gates the Gate that includes the majority of the capacity is assigned.

*Signed Date: This refers to the date that reflects the most recent contract signed affecting the capacity and not the date a contract was originally signed e.g. in the case of a relocation the date used is the date of the new contract not the original one. It would not however be updated for a non-MEC related amendment e.g. turbine or name change

Capacity Release:

**These projects have signed up to release full or partial capacity.

The list of Capacity Release TSO Applications is available [here](#)
