

**Grid Code  
Modification Recommendation Form**

**Title of Recommended Proposal:** Stranded Definitions

**MPID (EirGrid Use Only):** 341

<b>Date:</b>	2 <sup>nd</sup> of December 2025
<b>Recommended at GCRP Meeting:</b>	25 <sup>th</sup> of September 2025
<b>Grid Code Version:</b>	15
<b>Grid Code Section(s) Impacted by Recommended Proposal:</b>	<ul style="list-style-type: none"><li>Definitions</li></ul>

**The Reason for the Recommended Modification:**

The purpose of this modification is to eliminate redundant definitions that are no longer utilised within the Grid Code or any other Market Codes. These definitions were included in previous versions of the Grid Code but have become obsolete as the Grid Code definitions have evolved. Such unused definitions are now considered stranded and are targeted for removal to ensure clarity and relevance.

**History of Progression through GCRPs, Working Group and/or Consultation:**

This modification proposal was presented at the September 2025 GCRP meeting. The proposal was discussed in detail during the meeting. If no objections are raised, the TSO will proceed to issue a Recommendation paper to the CRU.

**Summary Note of any Objections to the Recommended Change from GCRP Members or Consultation Responses:**

No formal objections were raised during the GCRP meeting.

A Table Outlining the Proposed Changes:

Section	Red Line Version Text <i>Deleted text in <del>strike-through red font</del> and new text highlighted in blue font</i>	Green Line Version Text
Definitions	<ul style="list-style-type: none"> <li>• <b>Definition (Demand Side Unit Energy Profile)</b> The estimated total <b>Energy</b> requirement for an <b>Individual Demand Site</b> or aggregated consumption for each <b>Individual Demand Site</b> which form part of an <b>Aggregated Demand Site</b> for each <b>Imbalance Settlement Period</b> in the following <b>Trading Day</b> and which must be submitted to the <b>TSO</b> in the <b>Availability Notice</b> under <b>SDC1.4.4.2</b>.</li> <li>• <b>Definition (Capacity Adequacy Indicator)</b> An indication issued by the <b>TSO</b> for each weekly peak of the year based on <b>Availability</b> and <b>Demand</b> forecasts whether or not there is sufficient <b>Generation Capacity</b> to meet <b>Demand</b>.)</li> <li>• <b>Definitions(De maximisation Instruction)</b> An instruction issued by the <b>TSO</b> to <b>Generators</b> to cease <b>Maximisation</b>.</li> </ul>	<p>No new text is proposed.</p>
