Total TSO Contracted Wind: 1384.85

Note:

For those wind farms above with no MEC included, please refer to the Connected Wind report as the Installed MW above refer to the remainder of the MW due to be installed to complete the connected MEC.

When wind farms are a mix of capacity from different Gates the Gate that includes the majority of the capacity is assigned.

Projects with a wind element to their generation plant will be recorded in the contracted TSO (Non Wind) list.

*Signed Date: This refers to the date that reflects the most recent contract signed affecting the capacity and not necessarily the date a contract was originally signed e.g. in the case of a relocation the date used is the date of the new contract not the original one. It would not however be updated for a non-MEC related amendment e.g. turbine or name change.
